***Election/Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to a semiconductor device, classified in class 257, subclass 784.
  - II. Claims 12-20, drawn to an apparatus/method of using an apparatus classified in class 228, subclass 180.5

2. The inventions are distinct, each from the other because of the following reasons: Inventions II and I are related as method/process of using an apparatus and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of Group I invention would not necessarily imply unpatentability of the process of the group II invention, since the device of group I invention could be made by method of using the apparatus different from those of group II invention. For example, by bonding the wires on the chip pads and inner leads having predetermined lengths and then adjusting the position and alignment of the inner leads with reference to the chip to achieve the desired ratio of the distances between the pads and bends.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
